01

Project Overview

BREIF 4: PLANET GENERATION

How might we create joyful place-based opportunities for people across generations to improve planetary health?

KEY QUESTIONS

How can we create opportunities for different generations to communicate with each other, specifically about planetary health?

How can we build a space that is customizable to both physical location and interest of participants?

How can design support the needs, aspirations, and interests of both a young and an aging population at the same time?

PROBLEM STATEMENT

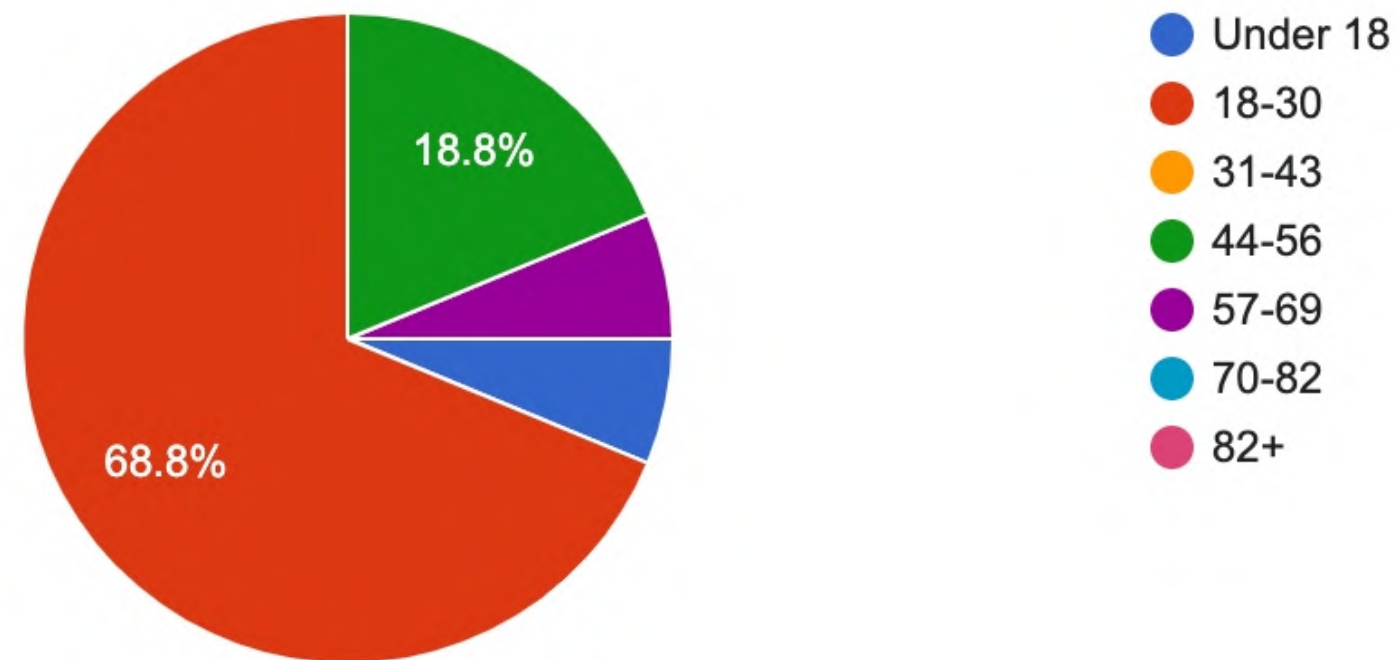

We aim to create an **engaging recreational space** specifically designed for multiple generations to use simultaneously, so that they can enjoy **shared activities** in order to foster a desire to help the local environment through better relationships, connectivity, and understanding between a community's various age groups.

02

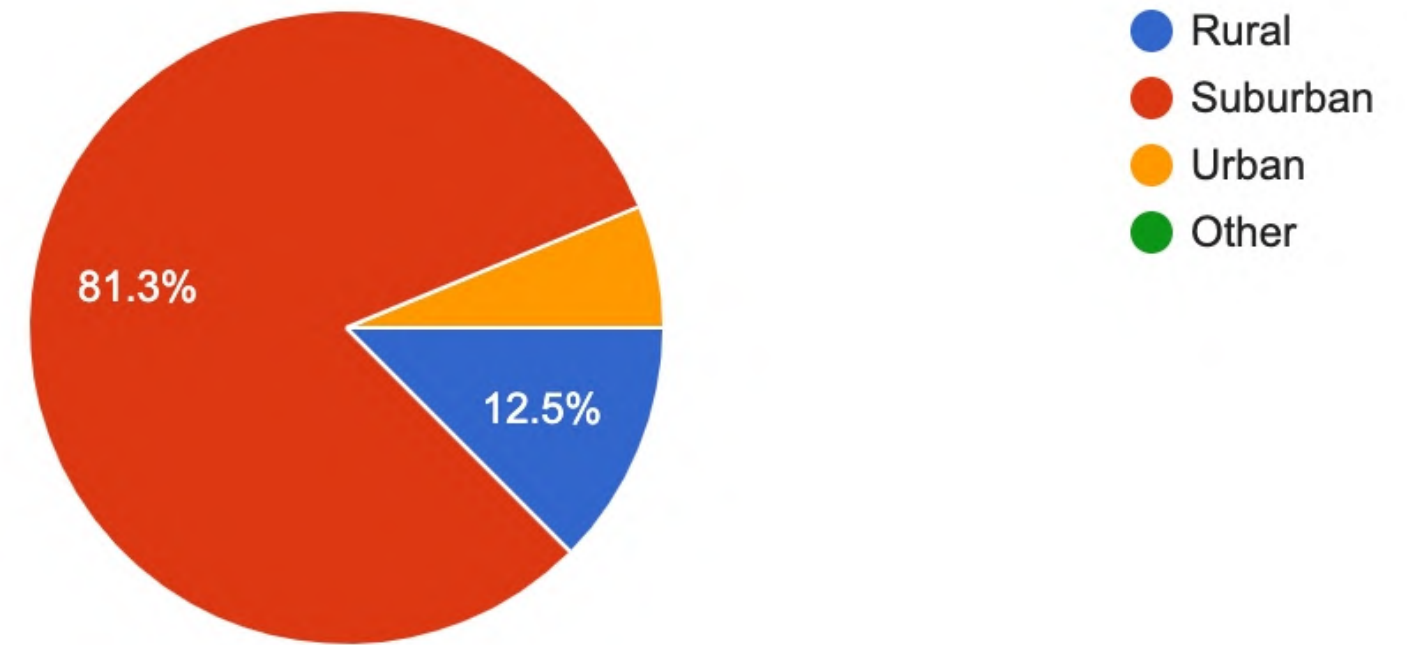

Understanding the User

SURVEY

How old are you?

How would you describe your community?

- What kind of changes would you like to see in your community?
- What about the community do you think residents care about most?
- What are your opportunities to connect with older/younger generations?
- What would be included in your ideal public space?

SURVEY RESULTS

- 93% of people are interested in helping to make the community better.
- 87.5% of people think it is important to have young and older people talk to each other about community issues.

9 TOTAL SUPER-STORES

04

Refining the Design

DESIGN

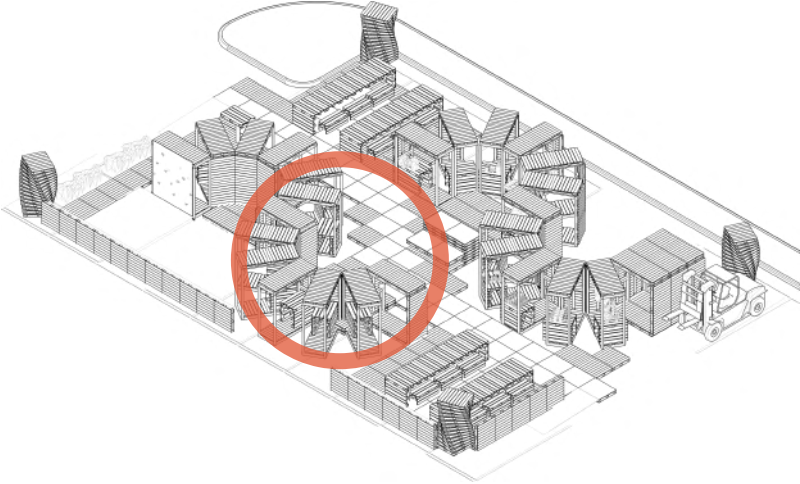

An aerial perspective of a community center constructed from stacked cardboard boxes. The building features a central courtyard with green grass and a climbing wall. People are seen walking around the structure, and a forklift is parked nearby. The scene is set in an urban environment with cars and trees visible in the background.

SUMMARY AND TAKEAWAYS

**Community Crates will bring joy,
improve inter-generational
connection and planetary health**

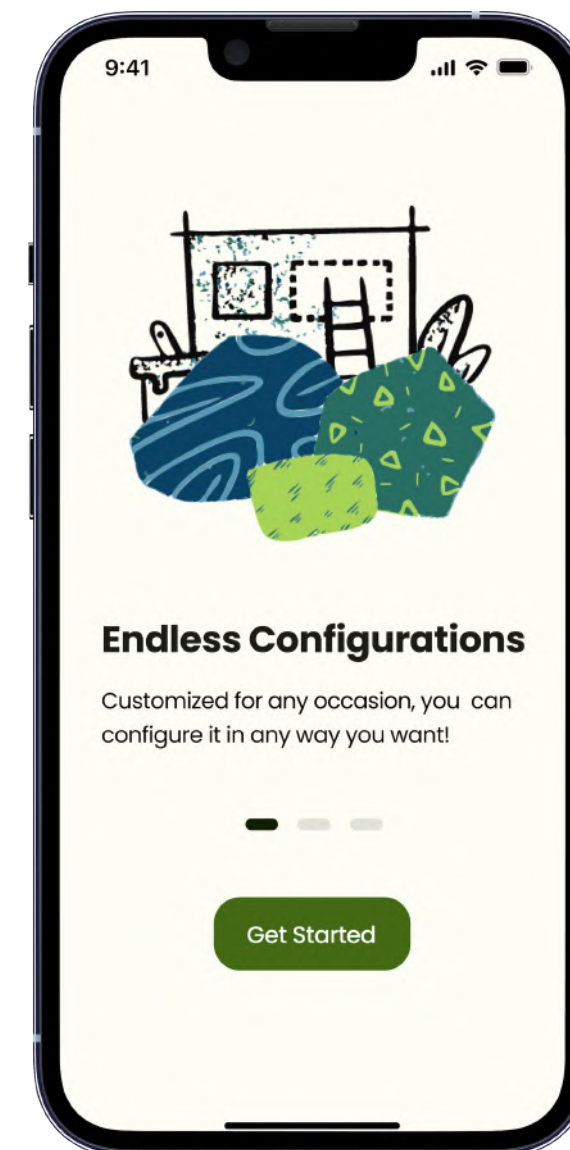

**through education, recycling, and emphasizing
community. We hope to bring happiness to a
variety of groups including people of all ages.**

Design Details and Improvement

How do we improve design to maximize

- Safety for children
- Comfort for older adults
- Accessibility
- Ease of setup
- Visual appeal
- Durability
- Variety of sizes and configurations

Crate inspection is crucial for the integrity of the structures. Recycled crates can have stains that lead to mold, experience loss of structural integrity, etc.

Accessibility is vital for all parts of Community Crates including the app, which needs to be as accessible as possible, especially for older adults and those with disabilities
